Dividing Polynomials - Long Division

Steps: 1. Write as a division problem w/ dividends & divisor in descending order, leaving spaces for missing terms in the dividend (0x)

- 2. Divide leading terms and write the result above the 1st term in the dividend $\frac{x}{1}$
- 3. Multiply the result from #2 by the divisor & write the product under the dividend
- 4. Put () around result from #3, distribute the subtraction sign & then add
- 5. Bring down remaining terms & repeat until there are no remaining terms in the dividend
- 6. Answer can be written in several ways

Dividing Polynomials - Synthetic division:

Can only be used to divide by a linear function steps:

- 1. Write the terms of the dividend in descending order. Write the coeff. of the dividend in the first row using zeros for any missing terms not found in the dividend.
- 2. Write the zero, r, of the divisor (x-r),in the box.
- 3. Drop the 1st coeff. to the last row.
- 4. Multiply 1st coeff. by r & put product under the 2nd coeff.
- 5. Add product from #4 to 2nd coeff. & write the sum in the last row.
 - 6. Repeat #4 & #5 until all coeff. have been used.
 - 7. Write answer by putting variables behind the #'s in the last row. Start with 1 degree less than the dividend polynomial.

Verify the following polynomial identity

$$(a+b)(a^2-ab+b^2)=a^3+b^3$$

$$(a+b)(a^{2}-ab+b^{2}) = a^{3}+b^{3}$$

$$a(a^{2}) + a(b^{2}) + b(a^{2}) + (-ab) + b(b^{2}) = a^{3}+b^{3}$$

$$a^{3} - a^{2}b + ab^{2} + (-ab^{2}) + (-ab^{$$

Therefore, $(a+b)(a^2-ab+b^2)=a^3+b^3$ is a _____ statement.
